Technical Information for Ragg Wool

WOOL IS WATER RESISTANT. The quality that distinguishes wool fibers from hair or fur is the presence of a hard, water-repellent outer layer that surrounds each hollow fiber, overlapping like shingles on a roof. .

WOOL IS MOISTURE WICKING. Besides keeping outside moisture away from the skin, wool also wicks away perspiration.

WOOL IS A WONDERFUL INSULATOR. The crimp of the wool produces insulating air spaces that retain body heat.

WOOL REGULATES TEMPERATURE AND IS BREATHABLE. Wool has a very wide comfort range, essential for adapting to changing weather conditions.
